Pilot Design Workstream

Goal

Design a first commercial test for a narrow athlete segment with clear success metrics and minimal operational burden.

Pilot Design Structure

- choose a sharp wedge
- define a 90-day test scope
- select a buyer and an influencer
- set success metrics before launch
- document proof requirements and feedback loop

Recommended pilot wedge

High-heat endurance or high-load performance athletes with a coach or performance team involved.

Example Success Metrics

- pilot conversion rate
- athlete or coach willingness to continue
- number of qualified conversations
- signal quality from referrals or team introductions
- clarity of proof requirements for scaling

Deliverable

A pilot brief that is narrow enough to execute, measurable enough to learn from, and aligned to the premium athlete brand. The recommended pilot design emphasizes a small, focused set of athlete conversations over broad market expansion.
