

AGENCYOS

i9 Sports

Final Brief

Executive Summary

A successful youth sports business can be a strong AgencyOS fit when the operating layer is still manual, fragmented, or owner-dependent. The opportunity is not to replace the sports experience; it is to reduce operational overhead and improve consistency.

AgencyOS fit

- structured operating rhythms
- clearer parent comms
- better scheduling visibility

Risk if ignored

- manual overload
- inconsistent follow-up
- slower season execution

What information was reviewed

Website model

i9 Sports presents a repeatable youth sports model with recurring leagues, camps, clinics, and

Operating signals

No tryouts, all-skill welcome programs, weekly schedules, and trained officials suggest a need for

Family experience

The model is built around convenience and participation, which creates recurring communication and

Key observations

- The business repeats across seasons and locations, which creates operational consistency needs.
- Parent communication is likely a high-volume recurring task.
- Schedule creation, updates, and event communication are likely manual workstreams.
- Staffing and official assignment coordination likely require visibility and follow-through.
- Retention and re-registration are likely memory-driven unless structured into a learning loop.

AgencyOS value opportunity

The most valuable fit is operational leverage

AgencyOS is strongest when it turns manual coordination into a repeatable system that supports family experience, local operations, and seasonal consistency without replacing the human feel of the brand.

What AgencyOS can do

- streamline parent comms
- improve schedule visibility
- support coach coordination
- strengthen retention loops

What it protects

- service consistency
- parent trust
- operational clarity
- growth without chaos

Recommended next step

Pilot AgencyOS in one program or region by mapping communication, scheduling, and re-registration workflows before
