Project Brief

Project Name

i9 Sports AgencyOS Value Review

Owner

Operator / business owner review

Outcome

Assess whether AgencyOS can improve operations, communication, scheduling, and service consistency in a successful but manually run youth sports business like i9 Sports.

Why This Needs Teams

The work spans parent communication, player registration, scheduling, volunteer staffing, venue coordination, coach onboarding, and retention follow-up. This is a multi-lane operational workflow rather than a single-product problem.

Value Hypothesis

AgencyOS can add value by turning fragmented manual work into structured operating rhythms: intake capture, scheduling logic, parent follow-up, staff coordination, retention tracking, and recurring season management. The goal is not to replace the business model but to reduce administrative drag and improve consistency.

Success Criteria

- clear operational pain points are identified
- realistic AgencyOS use cases are mapped to the business model
- value is framed in terms of time, consistency, and scale
- risks and non-goals are explicit

Non-Goals

- Do not assume the company wants a full software rebuild.
- Do not treat agency work as a replacement for local community management.
- Do not promise automation without human oversight for event operations and parent experience.
