

Diana Legal Spend Walkthrough

AgencyOS Solo vs AgencyOS Pro - client-facing adoption guide

Plain-English idea

- AgencyOS does not replace Diana's process or judgment.
- It sits beside the current workflow and helps organize repeatable work.
- The goal is more consistent invoice review, guideline checks, escalations, reporting, and learning.

Starting Assumption

- Diana already has processes for invoice review, outside counsel guideline checks, rates, timekeepers, exceptions, approvals, reporting, and stakeholder communication.
- AgencyOS should not ask her to throw those away.
- The adoption path is observe, preserve, support, test, review, and expand only if useful.

Observe current process	Preserve what works	Support beside workflow	Pilot safe use case	Review results	Expand only if useful
-----------------------------------	-------------------------------	-----------------------------------	-------------------------------	--------------------------	---------------------------------

Solo vs Pro At A Glance

Solo	Pro
One AI-supported workflow for Diana to test personally.	Multiple coordinated agencies for a repeatable law firm operating system.
Best for invoice review against guidelines, summaries, issue tags, and draft escalation notes.	Best for matter spend, invoice review, guideline memory, reporting, risk checks, and learning.
Fast setup. Low overhead. Narrow pilot.	More setup. More structure. Better for complex recurring work.

Intake To Onboarding

This section is the most important part. The intake should feel like a short working conversation, not a technical setup.

What intake must learn

- How invoices come in today.
- Who reviews and approves them.
- Which tools, templates, and guidelines are already used.
- What usually causes an exception.
- What reports or handoffs are expected.

Current workflow	Safe use first test	AI limits can/cannot	Human gates approval	Pilot Solo or Pro	Run beside current process	Review decide
------------------	---------------------	----------------------	----------------------	-------------------	----------------------------	---------------

Step 1: Understand The Current Workflow

- How do invoices come in today?
- Who reviews them?
- What tools or systems are already used?
- What guidelines or rules are checked?
- What usually causes an exception?
- Who approves adjustments or disputes?
- What reports are already expected?

Why this matters: AgencyOS needs to support Diana's actual process, not invent a new one in a vacuum.

Step 2: Identify The First Safe Use Case

- Good first candidates: review checklists, invoice note summaries, likely billing issue tags, escalation drafts, monthly matter summaries, and repeat exception tracking.
- Avoid starting with final approval decisions, legal interpretation, disputed client-sensitive decisions, policy changes, or confidential data without permission.

Step 3: Define What AI Can And Cannot Do

Solo	Pro
One AI-supported workflow for Diana to test personally.	Multiple coordinated agencies for a repeatable law firm operating system.
Best for invoice review against guidelines, summaries, issue tags, and draft escalation notes.	Best for matter spend, invoice review, guideline memory, reporting, risk checks, and learning.
Fast setup. Low overhead. Narrow pilot.	More setup. More structure. Better for complex recurring work.

Human Approval Gates

Before onboarding is complete, Diana should name what always comes back to her or another authorized person.

Human approval should be required for

- Disputed invoice decisions.
- Policy exceptions.
- Client-specific guideline interpretation.
- Outside counsel relationship concerns.
- Legal, compliance, or confidentiality risk.
- Financial adjustments, final approval notes, and external communication.

Choose Solo Or Pro For The Pilot

Use AgencyOS Solo if Diana wants

- One AI-supported workflow.
- Quick setup.
- Low overhead.
- Personal productivity support.
- One repeatable task improved first.

Use AgencyOS Pro if the firm needs

- Multiple legal spend workflows connected.
- Shared guideline memory.
- Matter-level spend visibility.
- Repeat issue tracking.
- Reporting, governance checks, and handoffs.

Run A Parallel Pilot

- For the first cycle, AgencyOS should run beside the existing process.
- The current process remains the source of truth.
- AgencyOS produces draft checklists, summaries, issue tags, escalation notes, reporting drafts, and learning notes.
- Diana compares the AI-supported output against the current process.

Use Case 1: Diana Uses AgencyOS Solo

Scenario

- Diana wants one AI workflow to help with invoice review against outside counsel guidelines.
- Solo is the right fit when Diana wants to test AgencyOS personally before introducing a broader operating system.

What Diana Gives The System

- Sample outside counsel guidelines.
- Invoice review checklist or current process notes.
- Common billing issues and example adjustment reasons.
- Preferred summary format.
- Approval rules and what should never be automated.

What AgencyOS Solo Does

- Turns guidelines into a checklist.
- Reviews invoice notes against that checklist.
- Flags possible issues for human review.
- Drafts adjustment or escalation notes.
- Summarizes repeat issues.
- Saves what was learned for next time.

Solo Walkthrough

- Diana gives AgencyOS one workflow: invoice review against guidelines.
- AgencyOS asks only for the materials needed for that workflow.
- AgencyOS creates a review checklist.
- Diana tests it on a sample or low-risk invoice.
- AgencyOS drafts issue tags and review notes.
- Diana approves, edits, or rejects the suggestions.
- AgencyOS saves repeat patterns for future review.

Solo value

- Faster first draft.
- Cleaner review notes.
- Less repetitive checklist work.
- Better personal consistency.
- Low-risk way to try AI in the workflow.

Use Case 2: Diana Uses AgencyOS Pro

Scenario

- Diana wants a broader AI workflow across invoices, matters, guidelines, reporting, risk, and learning.
- Pro is the right fit when legal spend work is not just one task, but a repeatable operating system across matters and stakeholders.

What AgencyOS Pro Creates

Matter Spend	Tracks matter budgets, client preferences, spend patterns, and open disputes.
Invoice Review	Checks invoices, rates, timekeeper issues, billing descriptions, and adjustment notes.
Guidelines	Maintains outside counsel guidelines, rate rules, exception precedents, and approved review language.
Reporting	Turns review activity into matter summaries, dispute logs, and spend trend reports.
Risk + Proof	Checks whether decisions have evidence, approval notes, and the right escalation path.
Insights	Finds repeat issues, training gaps, reviewer inconsistency, and process improvements.

Pro Walkthrough

- Diana maps the existing legal spend process.
- AgencyOS Pro identifies which parts should become separate agencies.
- Intake captures invoice, matter, guideline, and approval context.
- Invoice Review checks the invoice. Guidelines checks the applicable rules.
- Risk + Proof flags anything that needs evidence or human approval.
- Reporting drafts matter and spend summaries. Insights identifies repeat patterns.
- Diana reviews exceptions and final decisions. Approved patterns are saved for future use.

Pro value

- More consistent invoice review.
- Better matter-level visibility.
- Clearer escalation paths.
- Reusable guideline memory.
- Stronger audit trail, better reporting, and less knowledge loss after an invoice closes.

Adoption Path

Start Solo	Test safe workflow	Compare current process	Learn pilot results	Expand only if useful
----------------------	------------------------------	-----------------------------------	-------------------------------	---------------------------------

- Start with Solo for one safe workflow.
- Use the results to see where the process gains value.
- Move to Pro only if the work needs coordination, shared memory, reporting, or governance.

What Success Looks Like

- Diana spends less time recreating the same review steps.
- Invoice notes are clearer.
- Exceptions are easier to explain.
- Repeat issues are easier to spot.
- Handoffs are cleaner.
- Reports are easier to draft.
- Human approval stays protected.

What AgencyOS Should Not Do

Do not automate these without approval

- Replace Diana's legal spend judgment.
- Override firm policy.
- Make final disputed invoice decisions.
- Send external messages without approval.
- Store sensitive information without permission.
- Change existing workflows without review.
- Create legal, financial, or client-facing commitments on its own.

Final takeaway

- AgencyOS Solo is the easiest way for Diana to try AI on one legal spend workflow.
- AgencyOS Pro is the stronger fit when the firm wants legal spend review to become a coordinated, governed, repeatable operating system.
- The safest adoption path is to run AgencyOS beside the current process, prove value, then expand only where it clearly helps.
