FluidLogic Pilot Concept

Recommended pilot wedge

High-heat endurance or high-load performance athletes, with a coach or performance team involved.

Why this wedge

- ? It aligns directly with FluidLogic's public performance narrative.
- ? It preserves the race-proven credibility bridge.
- ? It is narrow enough for a small team to test.
- ? It allows proof to be gathered through a focused set of athlete conversations and a limited commercial test.

Pilot structure

- ? Segment: 10–20 athletes or small team environments
- ? Duration: 60–90 days
- ? Buyer path: athlete, coach, trainer, or team performance lead
- ? Offer: limited pilot access, assessment, and proof-backed onboarding
- ? Measure: qualified conversations, interest conversion, continuation rate, and proof feedback

Pilot success metrics

- ? Number of qualified introductions
- ? Pilot participation rate
- ? Continued interest after the test window
- ? Quality of coach or team feedback
- ? Number of referrals or expansion opportunities

Messaging frame for outreach

- ? “Performance hydration for athletes operating in high-load environments.”
- ? “Built from motorsports-grade performance thinking.”
- ? “Designed for athletes who need hydration strategy under pressure.”

Risk guardrail

Do not imply guaranteed gains or universal athlete benefit. The pilot should position itself as a controlled proof-and-learning exercise, not a broad performance claim campaign.
