Learning Plan

Learning Objective

Turn each pilot and launch touchpoint into structured learning so FluidLogic can refine its athlete GTM motion without drifting into generic wellness language.

Signals To Track

- which athlete segment responds best
- which proof point is most persuasive
- which sales objection is most common
- which launched message gets engagement
- what conversion path appears viable for a small team

Cadence

- weekly review of engagement and pilot response
- monthly review of sales conversations and conversion patterns
- quarterly revision to strategy, content, and offer based on evidence

Decision Output

At each review, decide whether to stay, adjust, or pivot the target segment, positioning, or pilot design.
