Research Workstream

Goal

Identify the best athlete segments, buying paths, and wedge opportunities that can credibly leverage FluidLogic's motorsports and tactical proof without drifting into generic wellness.

Source-backed findings

- FluidLogic publicly frames Intelligent Hydration™ as personalized, data-informed hydration for athlete or vehicle performance.
- The company's Baja 1000 article emphasizes heat, fatigue, and decision-making under sustained exertion.
- Nix Pro monitors fluid and electrolyte losses in real time for administrators and coaches.
- Epicore's Gx Sweat Patch is positioned as a sweat-monitoring technology in high-performance settings.
- LMNT and Skratch occupy consumer hydration and electrolyte categories rather than integrated delivery systems.

Research conclusion

The strongest opportunity is not a wellness hydration storyline. It is a premium performance-system lane in which FluidLogic can stand for data-informed hydration under heat and load.

Most credible wedge

High-heat endurance and high-load performance athletes with a coach or performance team involved.

Buyer map

- athlete
- coach
- trainer
- team performance staff
- sponsor or manager

Deliverable

Opportunity map with wedge ranking, buyer map, objections, and proof requirements. The initial analysis indicates that the gap is in integrated delivery, not in generic hydration education.
